

Applications of Generative Artificial Intelligence for Teaching and Learning

Presenter: Emily Dux Speltz, Embry-Riddle Aeronautical University Worldwide

In this talk, Dr. Emily Dux Speltz will explore generative AI's role in education, examining its strengths and limitations for teaching and learning and highlighting specific applications for both students and educators. The session will include a hands-on portion showcasing advanced prompting techniques and an iterative approach to AI usage. Educators will better understand how to use AI effectively and become more prepared to guide their students in doing the same. Join us to learn how AI can serve as a valuable educational resource and how to prepare students for its increasing presence in academic settings.
